

Shrimp grader type R.S. 24

R.S. 24 is a compact and almost noiseless high-capacity grader characterised by a second to none operational reliability and very limited maintenance requirements.

The grader is equipped with 4 screens placed in 2 levels above each other. In this way the shrimps are in principle sorted twice in one single working cycle resulting in a very accurate size grading.

Change of the size grading is done simply by shifting to a screen with more or less space between the grids – an operation which is done in less than one minute.

As the R.S. 24 is very flexible and compact and due to its low own weight it is specially suited for installation on board all kinds of watercraft – from the small fishing boats to the huge ocean-going trawlers.

Technical data:

Length:	Approx. 1,160 mm
Width:	Approx. 490 mm
Height:	Approx. 900 mm
Weight:	Approx. 60 kg
Material:	Seawater-proof aluminium
Number of grades:	2 size grades 1 scrap/waste
Capacity:	Approx. 500 to 1,000 kg per hour
Power supply:	24V DC 230 / 380 / 400 / 440 V
Power consumption:	Approx. 100 W Available also in hydraulically operated version
